

Retesting for reinfection

Suggested self-reported CPD activities: - choose one or more or develop your own.

Educational activity	Measuring outcomes	Reviewing performance
<p>Activity 1 – Retesting reading: Read one or more resource for the evidence for retesting for chlamydia:</p> <ul style="list-style-type: none"> - AJGP article New best practice guidance for general practice to reduce chlamydia associated reproductive complications in women - Australian STI Management guidelines https://sti.guidelines.org.au/sexually-transmissible-infections/chlamydia/ - MoCCA website https://www.mocca.org.au/ 	<p>Activity 1 – Audit: Conduct an audit of patients with chlamydia at your clinic in the last 6 months. What proportion were retested within recommended timeframes (around 3 months after treatment)? What proportion were reinfected with chlamydia?</p>	<p>Activity 1 - Practice meeting: Present your audit findings to a practice meeting. Are retesting rates as you expected? What about reinfection rates? Facilitate a discussion with your colleagues about their chlamydia retesting practices. What information do they provide their patients? How is a retest organized? What other options and work processes could be implemented to support retesting?</p>

An electronic version of these CPD activities is available at <https://www.mocca.org.au/participating-clinics/cpd>

As relevant log your hours of educational activity, measuring outcomes and/or reviewing performance in myCPD Home (<https://mycpd.racgp.org.au/myCPD>)

Thanks to North Western Melbourne PHN, Central and Eastern Sydney PHN and Dr Chang June Jung for their assistance in developing these suggested self-reported CPD activities
